

Civil engineer and managing director with nearly two decades of experience in infrastructure project delivery, contract management and strategic business development. He has extensive experience in the German and international construction and infrastructure markets and maintains a strong professional network across the industry. Lidomir combines in-depth knowledge of HOAI, VOB and FIDIC contracts, as well as German construction and infrastructure regulations (VOB/A, VOB/B, VOB/C, ZTV-ING, HVA-StB), with proven expertise in delivering and managing complex international infrastructure projects.

He has led large-scale infrastructure projects under German and international public procurement frameworks and brings substantial experience in negotiating and executing complex contractual structures with both German and international clients and partners.

In his previous roles at KREBS+KIEFER and DORSCH, he was responsible for business development, cluster coordination and strategic positioning, supported by a strong understanding of quality management systems, operational processes and corporate functions. He successfully expanded international business activities, developed new markets and led multidisciplinary teams of up to 40 engineers and several sub-consultants. Furthermore, he supported the strategic transition and integration of KREBS+KIEFER into the DORSCH Gruppe.

In 2025, he led the management buyout and subsequent transition process, ensuring business continuity and the successful repositioning of **KKT Ingenieure International GmbH in the German market.**

Date and Place of Birth	30.07.1978, Berlin
